Industrial Internet:

“Pushing the Boundaries of Minds and Machines”

“...Big Data ‘knows’ when and where it needs to go..”

“...Big Data Analyst.....”

New e-Health Community

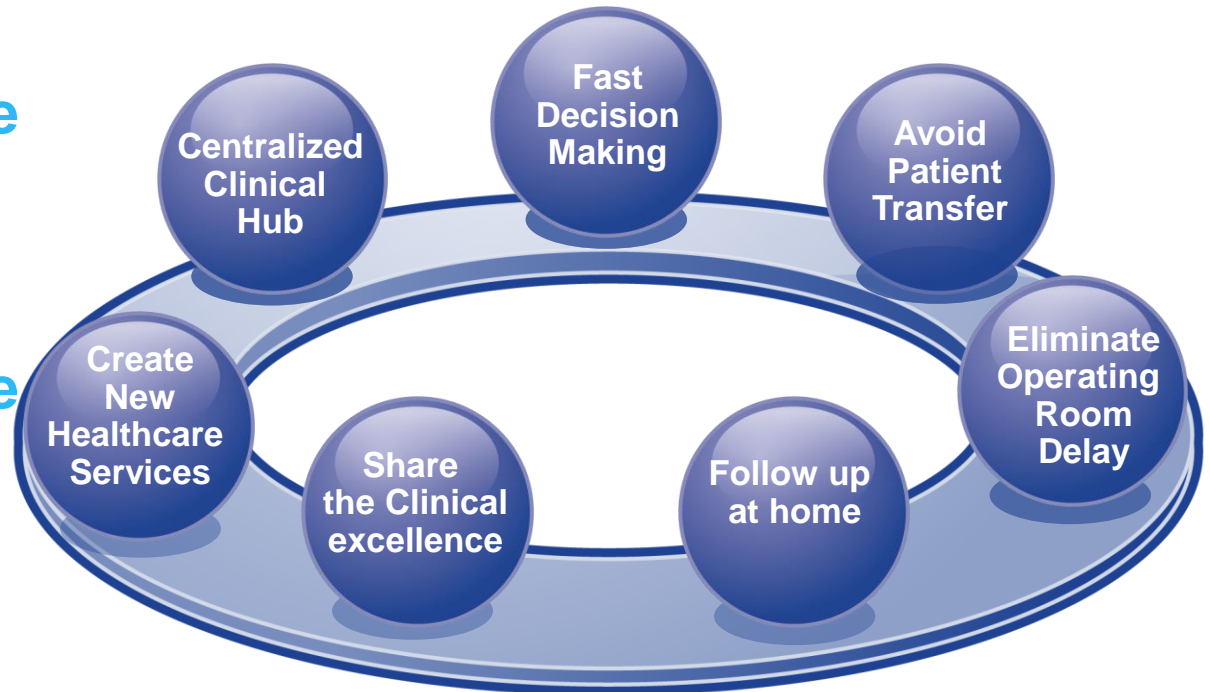

Enabling improved productivity

Configure end-to-end workflows to your specific needs, processes, and organizational standards.

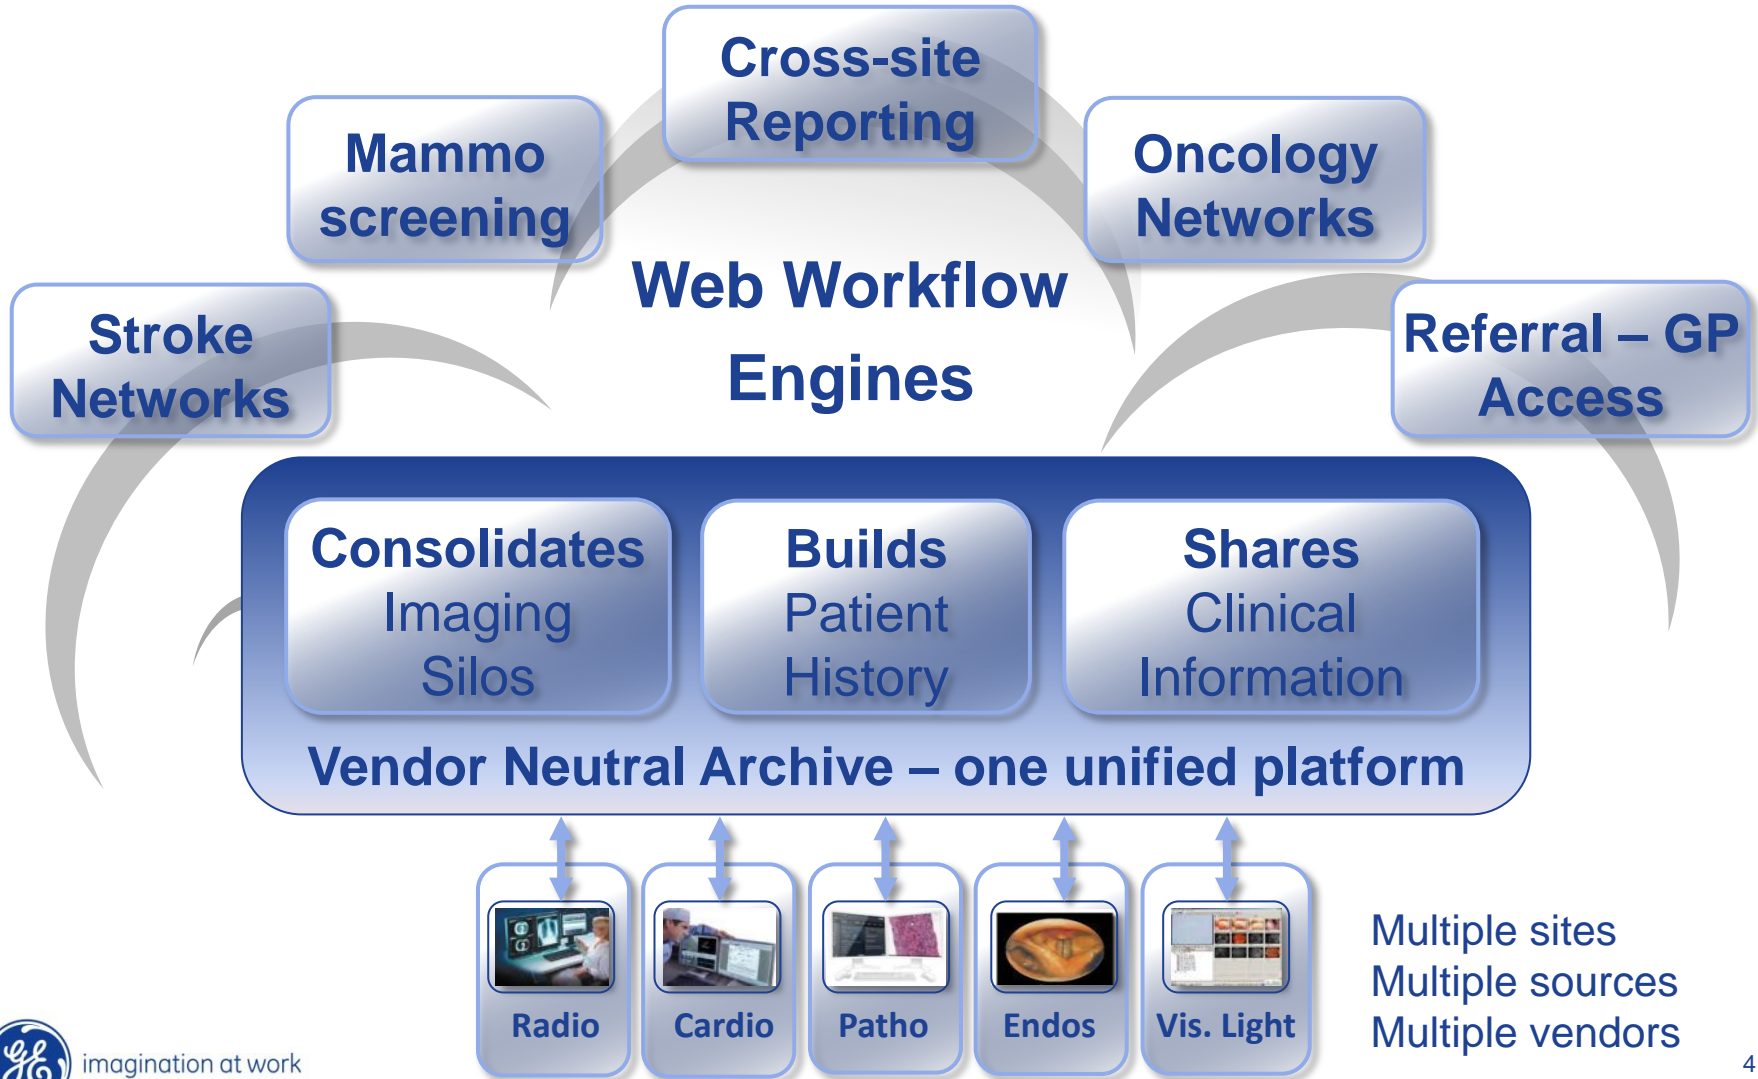

Create new healthcare Services for the Citizen

Create new healthcare Services for the patient

Enhanced clinical Services

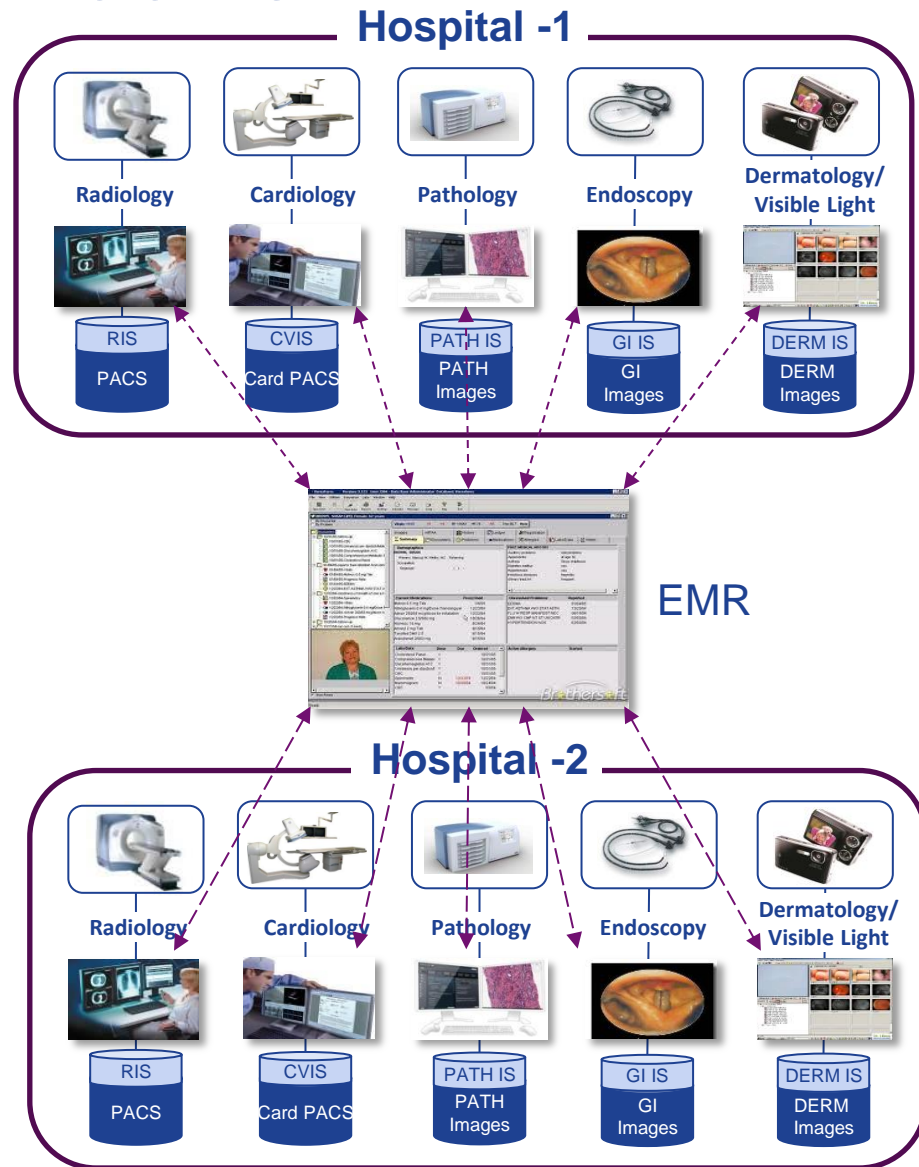

Connect different systems and share results

From the Current Situation

Challenges

- Multi-vendor, disparate silos
- Storage costs
- Management overheads
- Service continuity
- Complex custom Integration
- Data Access Challenges
- Multiple viewers & interfaces

To Cloud Healthcare Service Layer for the Citizen

Clinical insight within reach to help deliver patient results efficiently.

Some Examples: e-Health pathways

Today

Tomorrow

Digital Pathology:

Digital Radiology:

E-Health:

Result Sharing: HUS XDS

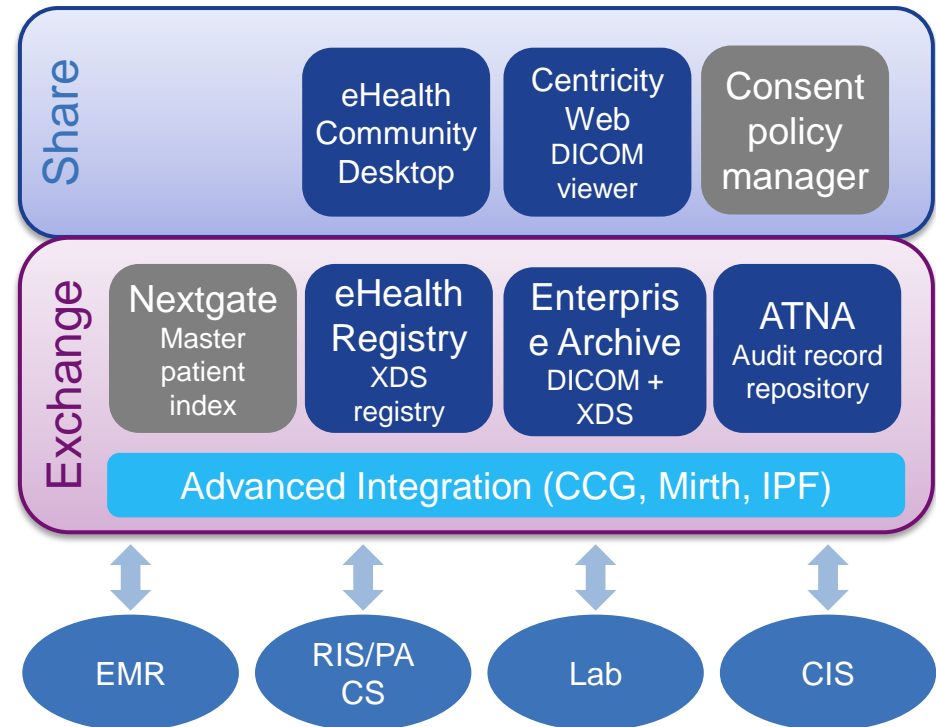

Project details

- XDS archive + clinical portal for documents and images
- 21 hospitals and 25 health centers
- 2 or 3 instances of RIS/PACS
- 1 million radiology exams/year
- Budget 4.2 MM\$ /3 years

Expected benefits

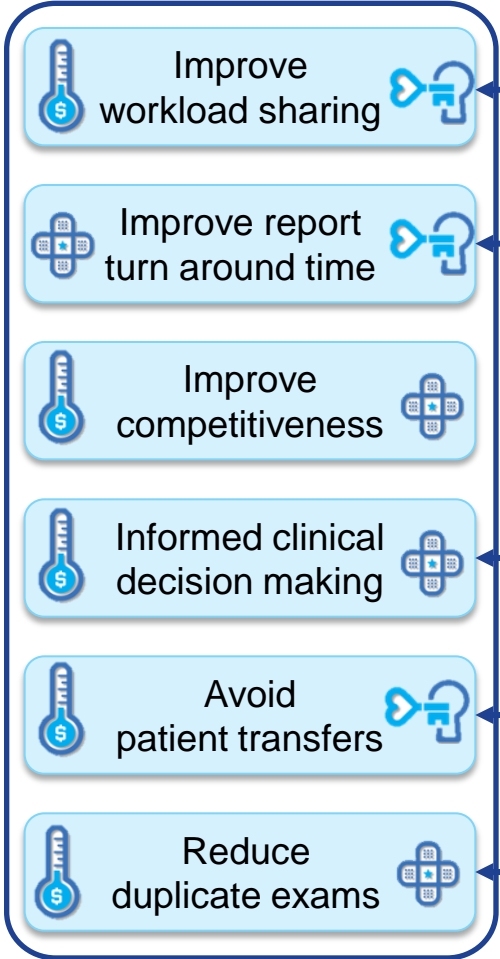

- Facilitate replacement of departmental workflow solutions
- Longitudinal patient record to access to clinical information across departmental boundaries

Biggest Challenge : Services

Canada Infoway Benefits

Benefit Evaluation Results from the Pan-Canadian Aggregate Study				
Benefit	Description	Annual Value	Resources	Capacity
Access				
Referring physicians	Efficiency improved by 50-60 minutes/week	\$160-190 million	N/A	N/A
Turnaround time	30-40% improvement in examination turnaround time	N/A	N/A	Turnaround time reduced by 10-24 hrs
Patient transfers	Unnecessary patient transfers avoided	\$8-14 million	N/A	10,000-17,000 patient transfers avoided
Quality				
Improved remote reporting	Enables 30-40% of radiologists to support care delivery and improves access for remote areas			
Productivity				
Technologist productivity	25-30% improvement in technologists' productivity	\$122-148 million	2,400-2,900 equivalent technologists	8-10 million examinations
Radiologist productivity	25-30% improvement in radiologists' productivity	\$169-203 million	450-540 equivalent radiologists	9-11 million examinations
Duplicate examinations	2-3% reduction in unnecessary duplicate examinations	\$47-71 million	240-358 equivalent technologists 43-63 equivalent radiologists	0.8-1.3 million examinations
Film costs	Elimination of film-related cost of materials and operations	\$350-390 million	N/A	N/A
