

Increase safety of tourists and all people in Venice

azienda Ulss 12 veneziana

THE FIRST QUESTION

- Why don't we speak about:
 - European digital Agenda? - Italian digital Agenda?
- I think that Italian situation is no good. The ICT situation of National Healthcare System is no good too. We defined many rules, protocols, codes but today we don't know if there is still a national authority that works about ICT and about the guide of our digital agenda.

THE SECOND QUESTION

The development of the clinical documents management takes too much time.

Why are we still working on Electronic Patient Record?

We think that this project is right for high standards hospitals, physicians, nurses and maybe right for a good budget. I think, on the contrary, that the framework of healthcare is different: clinical and not documental issues. Here is our priority: the development of clinical activities

THE THIRD QUESTION

- Italy is on late because we are not be able to guide our health organization. Electronic Patient Record has been a default because of the organizative problems.
- Telemedicine, cloud computing, integrated systems, etc. have to be a chance. Why don't we approach the innovation by a preliminary management of our organization?

CONCLUSIONS

I think that we have to change many frameworks and references if we want the ICT Italian divide in healthcare system not to be another default but a strong opportunity for a wise balanced growth.
