state services provider & local authorities

citizen or state identity provider

financial service provider

bank Identity provider

telecom service provider

telecom Identity Provider

1	access to his / her data
2	data transfer
3	access to services

FC² project: www.fc2-consortium.org

Conclusion for the general public

Today: no massive usage of digital identity system in general public

For the future, the question is: how to make it adopt?

The plus :
- It enables new online services where official documents are required
- It enhances user privacy

The minus :
- Too many standards
- Which ROI for the players of the identity value chain?
