

The background of the slide is a deep blue space scene. On the left, a large portion of the Earth is visible, showing blue oceans and white clouds. In the upper center, a bright sun or star is partially obscured by a red ring of light, with a lens flare effect. The overall atmosphere is futuristic and global.

Healthcare Challenges, E-Health & New Service Models

October 21, 2008

Alisoun K. Moore

Director, State & Local Health and Human Services

Alisoun Moore, MBA, MPA

- Director of Health and Human Services, Northrop Grumman
- Master of Public Administration
 - University of Maryland, Baltimore campus
 - Information Systems
- Master of Business Administration
 - Johns Hopkins University School of Medicine and Carey Business School
 - Business of Health, Medical Services Management
- 20 Years of experience in public and private sectors
 - CIO level
- Northrop Grumman Health IT Solutions
 - Dept of Defense EHR provider
 - Center Medicaid and Medicare claims processing
 - Veteran's Administration VISTA
 - Numerous Public health applications in states
 - Largest single contractor to U.S. Center for Disease Control (CDC)

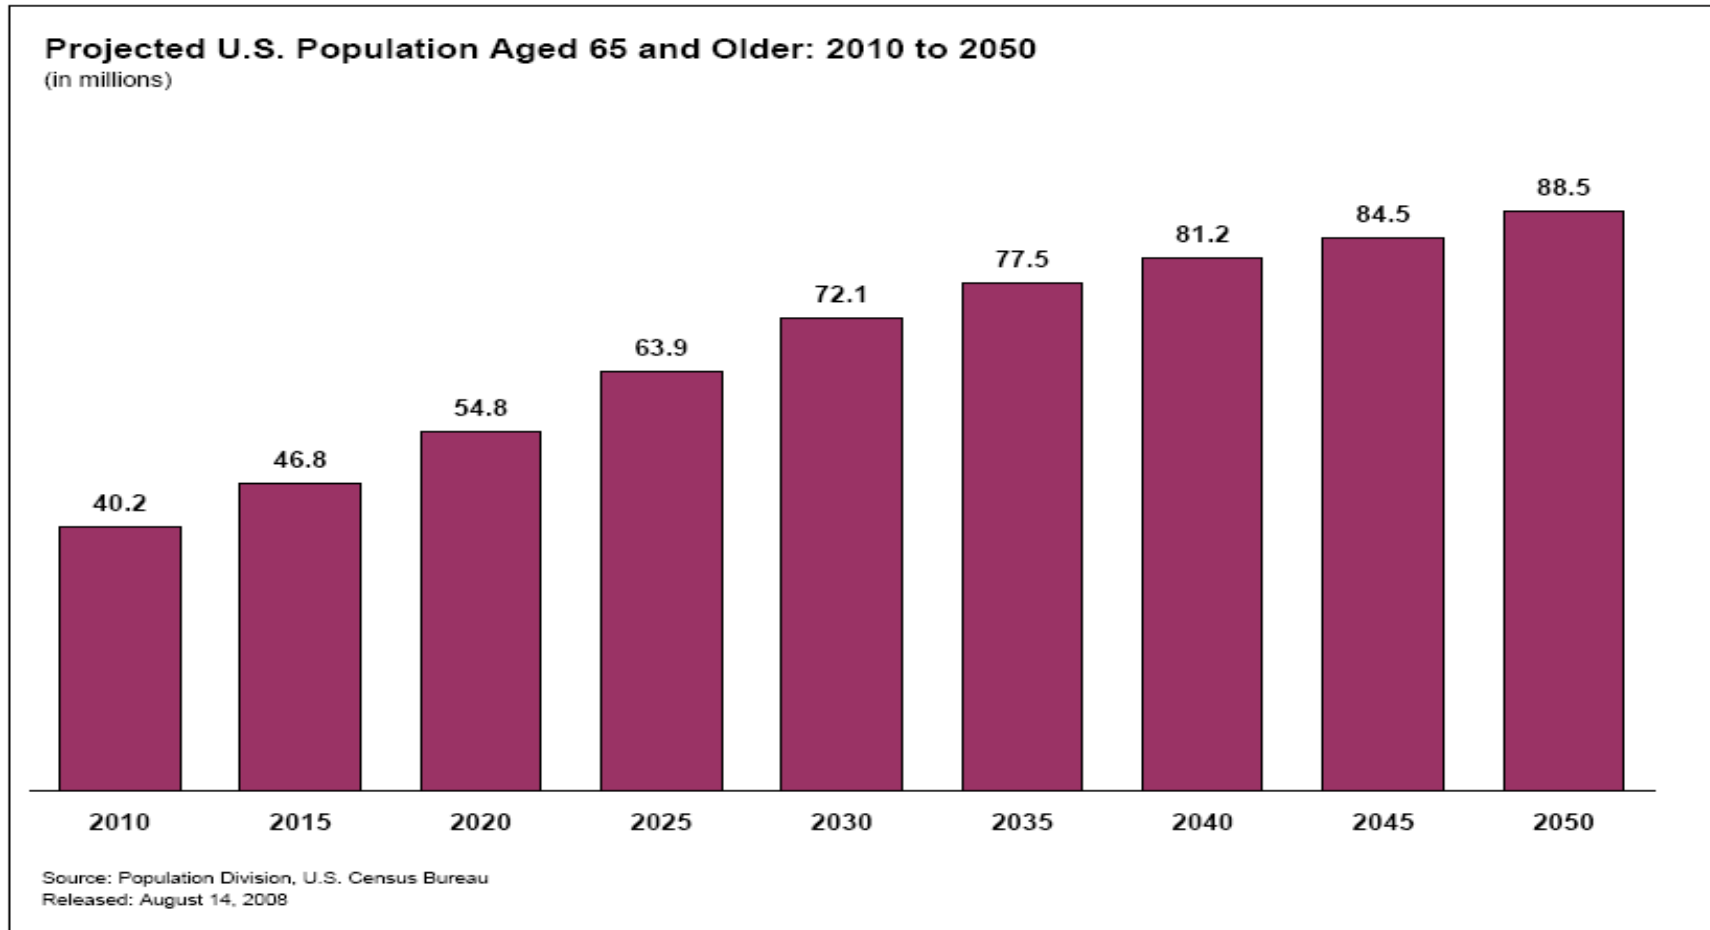

Overview

- Current issues healthcare
- IT-enabled solutions
- Barriers and Enablers

Demographic Drivers

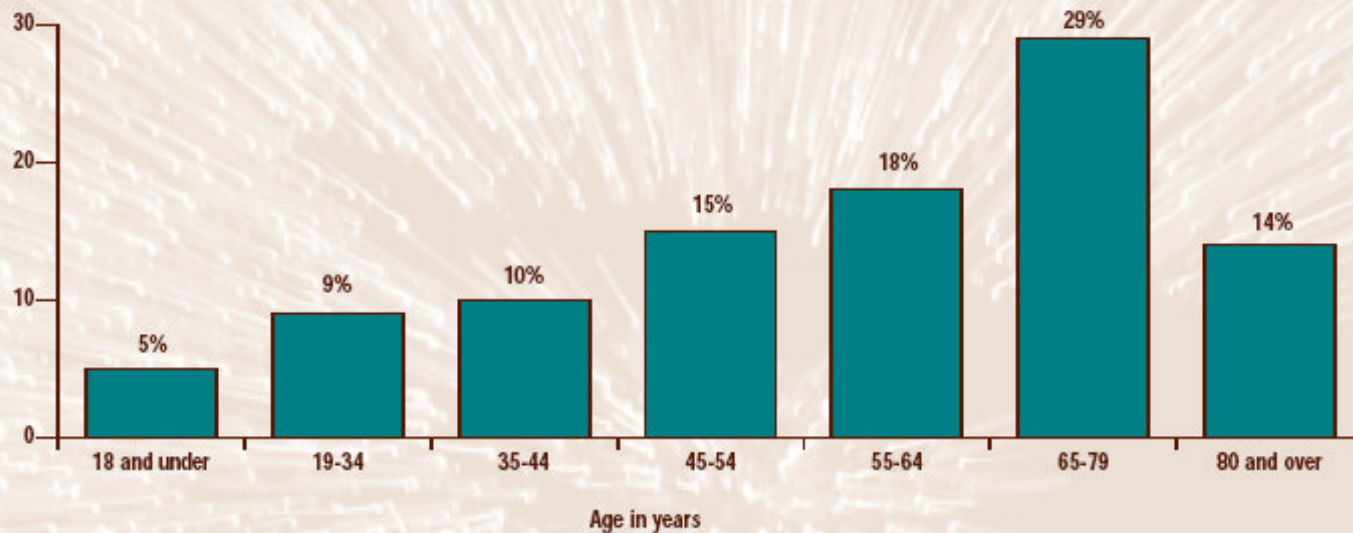

- Aging population
- Chronic disease
- Changing employment patterns
- Mobile, global workforce
- Patient empowerment

Aging

Healthcare Cost By Age

Chart 2. Percent of health care expenses incurred by the top 5 percent of health care spenders within different age groups: United States, 2002

Source: Conwell LJ, Cohen JW. Characteristics of people with high medical expenses in the U.S. civilian noninstitutionalized population, 2002. Statistical Brief #73. March 2005. Agency for Healthcare Research and Quality, Rockville, MD. Web site: <http://www.meps.ahrq.gov/PrintProducts/PrintProdLookup.asp?ProductType=StatisticalBrief>. Accessed April 7, 2006.

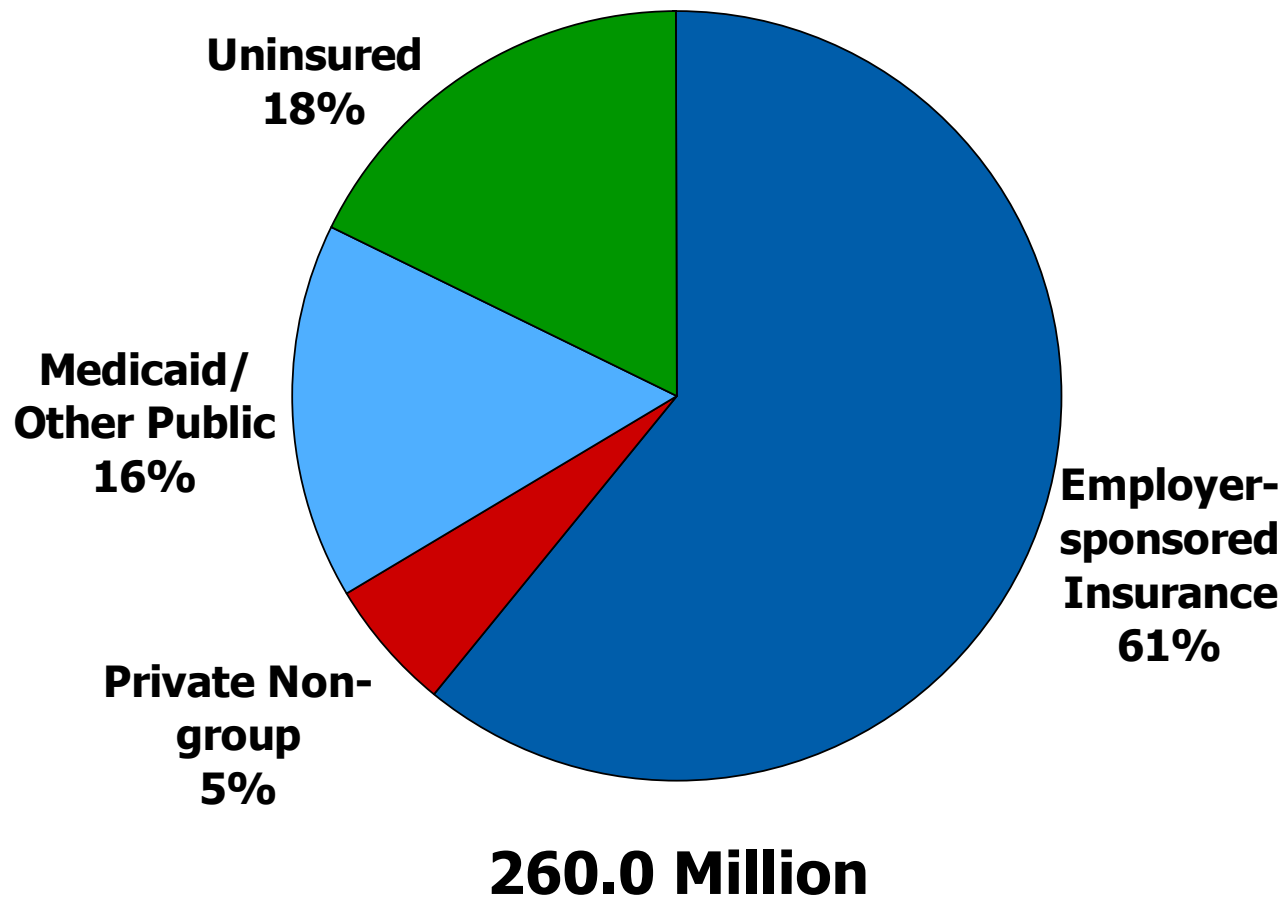

Chronic Disease

Issues

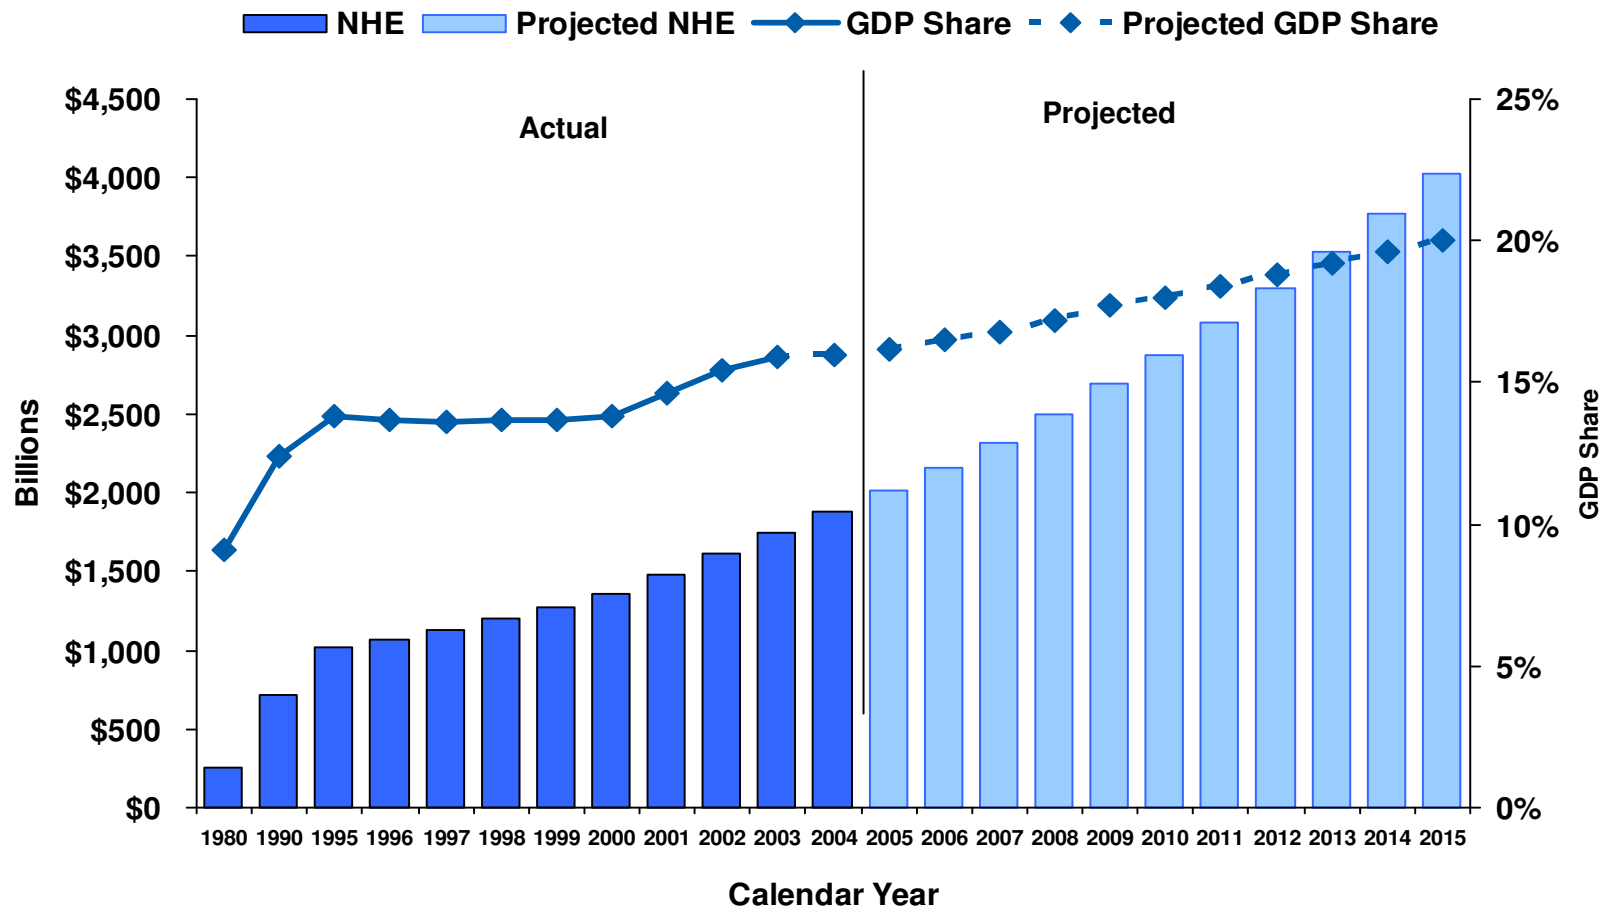

- Access
- Cost

Health Insurance Coverage of the Nonelderly Population, 2006

National Health Expenditures and Their Share of Gross Domestic Product (GDP), 1980-2015

National health spending is projected to continue to increase as a share of GDP over the next decade.

Health IT Applications/Markets

- Health Information Exchange
 - Sponsored by States with funding from Federal Gov't
 - Represents greatest savings (Rand)
- Electronic Health Records (EHRs)
 - 17% physicians
 - 31% Emergency Rooms
 - 29% Hospitals

Compared to UK and European nations US adoption is quite slow

- Telehealth/telemedicine
 - CAGR of 56% vs. 9.9%
 - Home care
 - Telehealth monitoring
 - Devices

Health Information Exchange

- Nationwide Health Information Network (NHIN)
 - Sponsored by U.S. Gov't
 - Goal to exchange electronic health records by 2014
- RHIOs/HIEs
- DoD – VA
 - World's largest EPR
 - Must track service personnel
 - Active duty
 - Veterans
- Commercial subscription services (i.e. Surescripts, Covisint/NGIT HIE service)

EHR Adoption in U.S.

- Slow in US
 - Presidential directive “...most by 2014”
 - Currently hovers below 20%
- Mandates
 - E-prescribing
 - Claims submission
- Incentives
 - HHS just announced Medicare EPR reimbursement for physicians
 - With recent Medicare change, more growth expected, but too early to quantify
- ROI is not achieved until 3-5 years
 - Only achieved if implementation is successful and usage high
- EHRs access not yet available to patients in most cases
 - Example: <http://www.thehealthplan.com/>

Telehealth and Home Care

- The use of digital networks to remotely monitor and treat patients.
- An emerging market with great potential to improve the quality of and delivery of care while decreasing costs
- Work processes and technology need to improve before telehealth adoptions becomes more widespread
- Traditional live-interactive video telehealth (**i.e. <http://www.teleatrics.com/>**)
 - Remote consults
 - Patient to physician
 - Physician to physician
- Traditional live-interactive video telehealth
 - Remote consults
 - Patient to physician
 - Physician to physician
- Store and forward (S&F) telehealth
 - Sending data, messages, images that can be stored and read/evaluated at later time
 - Includes radiology images, reports, lab results, clinician reports, etc.
 - Sending data, messages, images that can be stored and read/evaluated at later time
 - Includes radiology images, reports, lab results, clinician reports, etc.

Telehealth and Home Care

- Home monitoring telehealth
 - Increasing use of wireless technologies
 - Applications
 - Diabetes monitoring
 - Heart monitoring
 - Real time or store and forward
 - Device's communication with in-home network connected to external network for transmission
 - Increasing use of wireless technologies
 - Applications
 - Diabetes monitoring
 - Heart monitoring
 - Real time or store and forward
 - Device's communication with in-home network connected to external network for transmission
- Saves costs of visits and need for skilled nursing care
- Current growth projections: Home health care will grow at five year compound annual growth rate of 56%
 - Only 9.9% in clinical market (Datamonitor, December, 2007)

Challenges

- Interoperability
- Privacy/Security
- Legacy systems
- Broadband
- Cross-border
- Cost
