

Peter Hopton

Innovator in the Field of GreenIT Technology

verypcTM

ecology economy performance

Areas Covered

- ▶ My Definition Of Green IT
 - ▶ Eco Efficient ICT
 - ▶ Smart ICT
 - ▶ Ecological & Materials Sustainability
- ▶ Innovation on the Desktop PC estate
 - ▶ BroadLeaf Design Methodology
 - ▶ PecoBoo Technology
- ▶ Innovation in the Server Room
 - ▶ Iceotope Technology

BroadLeaf

- ▶ Establish A design methodology to minimise CO2 emissions both in manufacture and use.
- ▶ Produce a desktop PC that is both high performance, efficient and environmentally friendly.

What Can We Do Today To Make Green IT?

- ▶ Reduce size/qty of material
- ▶ Reduction of energy consumption in operation
- ▶ Turning equipment off/down when not needed
- ▶ Maintaining the performance expected from the user
- ▶ Use Materials Produced From Renewable Energy
- ▶ Eliminate PVC/BFR and other bad Halogens
- ▶ Find ways in which IT can reduce carbon emissions elsewhere

PECOBOO™

Innovation On The Desktop

PecoBoo

(patent pending)

The Principle of PecoBoo

- ▶ Use a Face Detection Algorithm with a low power webcam to determine if a user is present.
- ▶ Deactivate devices or enter low standby modes when no user is detected.
- ▶ Reactivate devices when a user is detected.
- ▶ Run at low frame rate to keep power usage minimal
- ▶ Use 'Double Take' technology to avoid false positives, but maintain low power use.

The logo for 'ice tope' is displayed in a bold, lowercase, sans-serif font. The letters are white and set against a dark blue, rounded rectangular background. The 'i' has a white dot. The background of the entire slide is a close-up photograph of water droplets on a dark surface, with a blue color cast.

ice tope

Innovation In The Server Estate
Ice tope

Key Technology

- ▶ Key is transferring heat from processors by immersing motherboard in ‘primary’ coolant
 - ▶ A ‘module’ contains an off-the-shelf motherboard(s) in primary coolant compartment; has separate secondary coolant channel(s)
 - ▶ Primary & secondary coolants share optimised heat transfer surface
 - ▶ Common ‘secondary’ coolant plumbing in ‘chassis’
 - ▶ Multiple shelves in ‘rack’
- ▶ Secondary water carries heat to external environment
 - ▶ “Free-cooling” by ambient air
 - ▶ Just pumps and (final) fan

Benefits

- ▶ To the end-user
 - ▶ Chiller-less “free cooling” at high ambient temperatures - 40 to 50°C
 - ▶ 93% reduction in cooling costs (associated carbon reduction)
 - ▶ Deploy high density systems
 - ▶ 84% reduction in space required
 - ▶ Use the most powerful processors (e.g. 150W) in high density systems
 - ▶ 2.5x “bang per rack”
 - ▶ Add computing capacity without chiller CAPEX

About Us

- ▶ A small innovative company in the UK
- ▶ Currently supply to UK public sector through partners
- ▶ Keen to find partners in the EU
- ▶ We're an ethical company committed to sustainability goals.
- ▶ Really interested in helping people reduce CO2 emissions both 'for IT' and 'using IT'
