Open Infrastructure for digital Healthcare

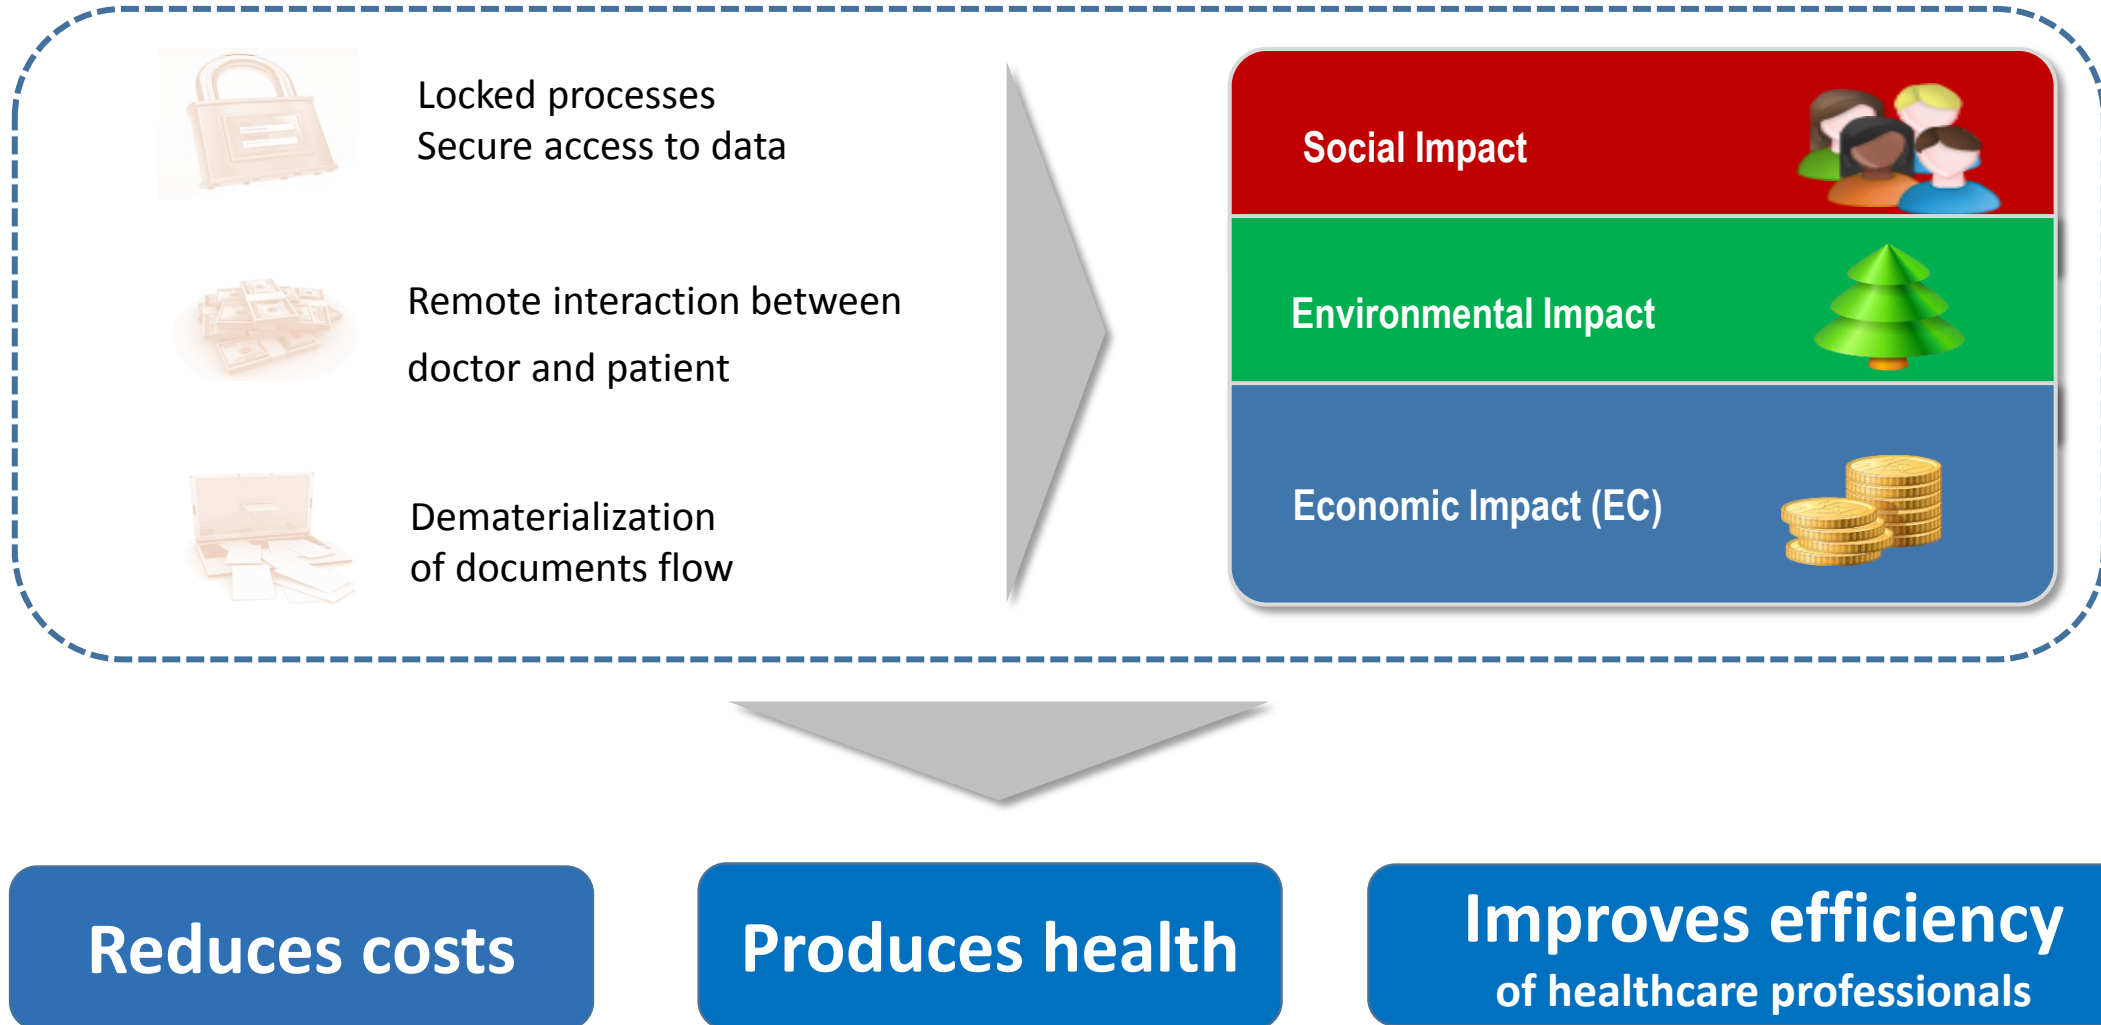

Bridging the digital divide and supporting advanced solutions

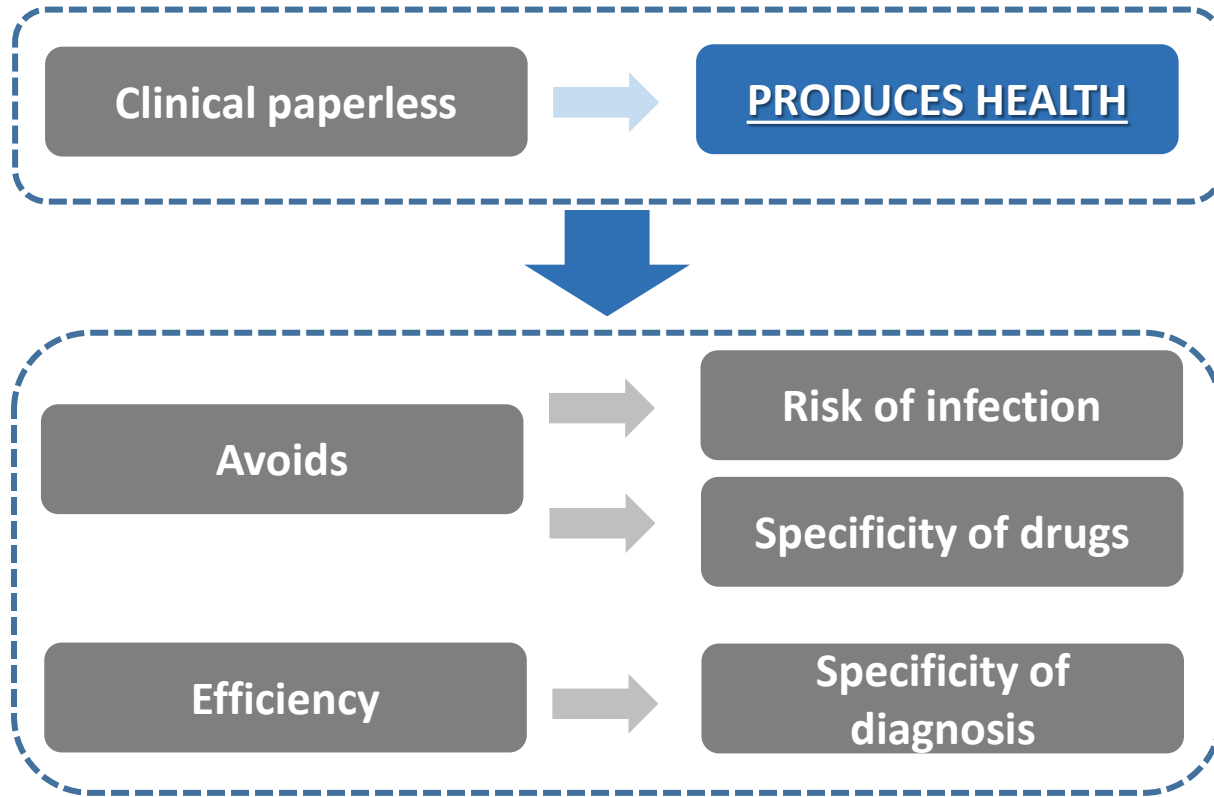

Consulenza per la
Dematerializzazione

17th-18th November 2014 Geneve, Switzerland – at CICG

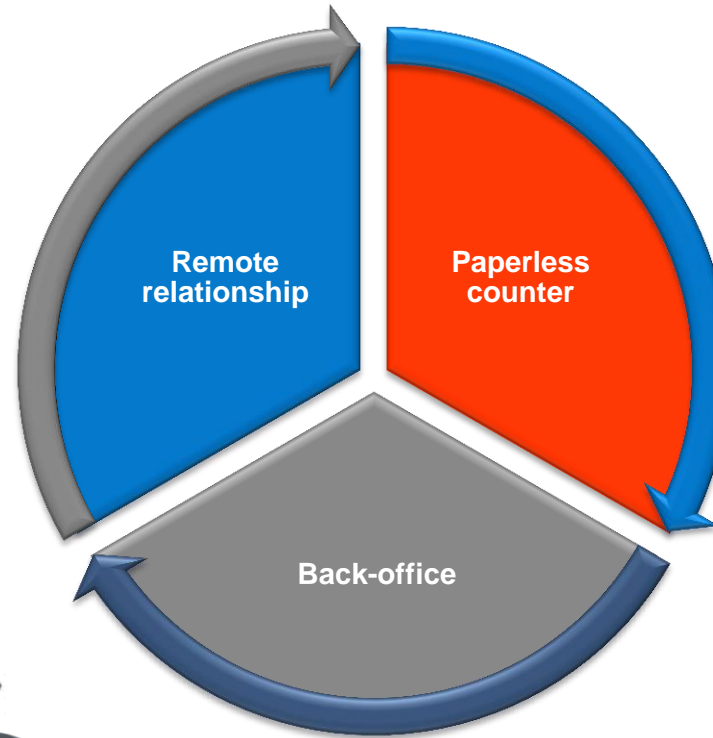

- InfoCert** **INFOCERT SOLUTIONS**
- 1 FEA (advanced digital signature) at the counter
 - 2 Identity Management
 - 3 Medical reports and images management
 - 4 Other sources management
 - 5 Electronic health record
 - 6 Electronic invoicing
 - 7 Electronic health record recovery system

InfoCert solutions allow you to remote and dematerialize the relationship with the user, while fully respecting the user experience established, through the use of:

- Management of medical reports and images
- Other sources management
- Electronic Health Record

InfoCert helps healthcare providers rethink their back-office activities in order to reduce costs and improve their efficiency.

In the more general process of rethinking at-the-counter activities, InfoCert paperless solutions are the factor which enables paperless processes:

- Advanced Electronic Signature (FEA) at the counter
- Identity management

Bridging the digital divide

- Electronic invoicing
- Electronic health records recovery system

PRODUCTS

Structured

In structured documents the type of information and their position is determined in advance.

Ex.

Medical report

Semi- structured

In semi-structured documents the type of information contained is known but its position can change.

Ex.

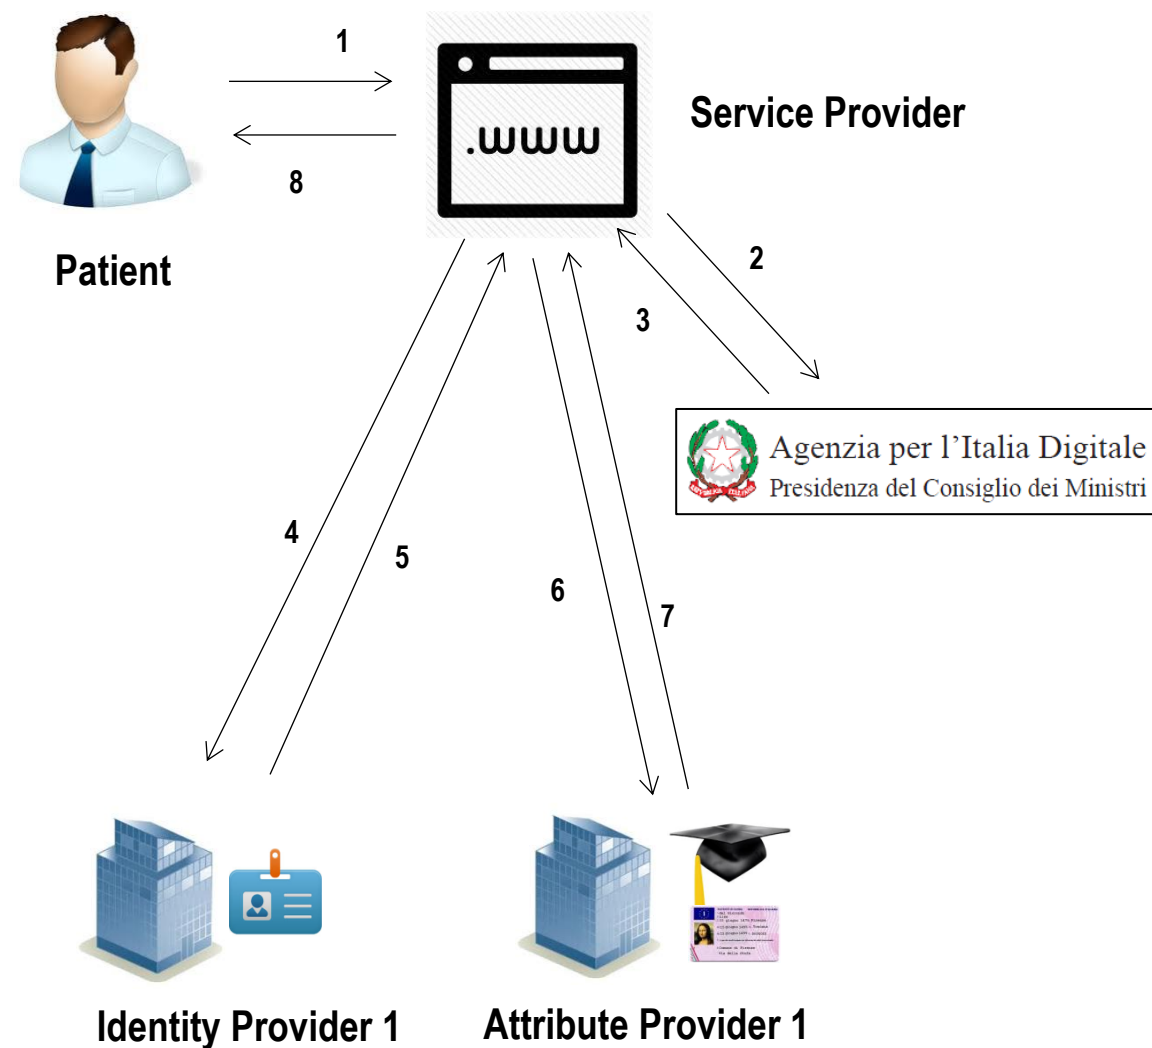

Invoice

Unstructured

In unstructured documents the type of information contained is variable and there is no planned document structure.

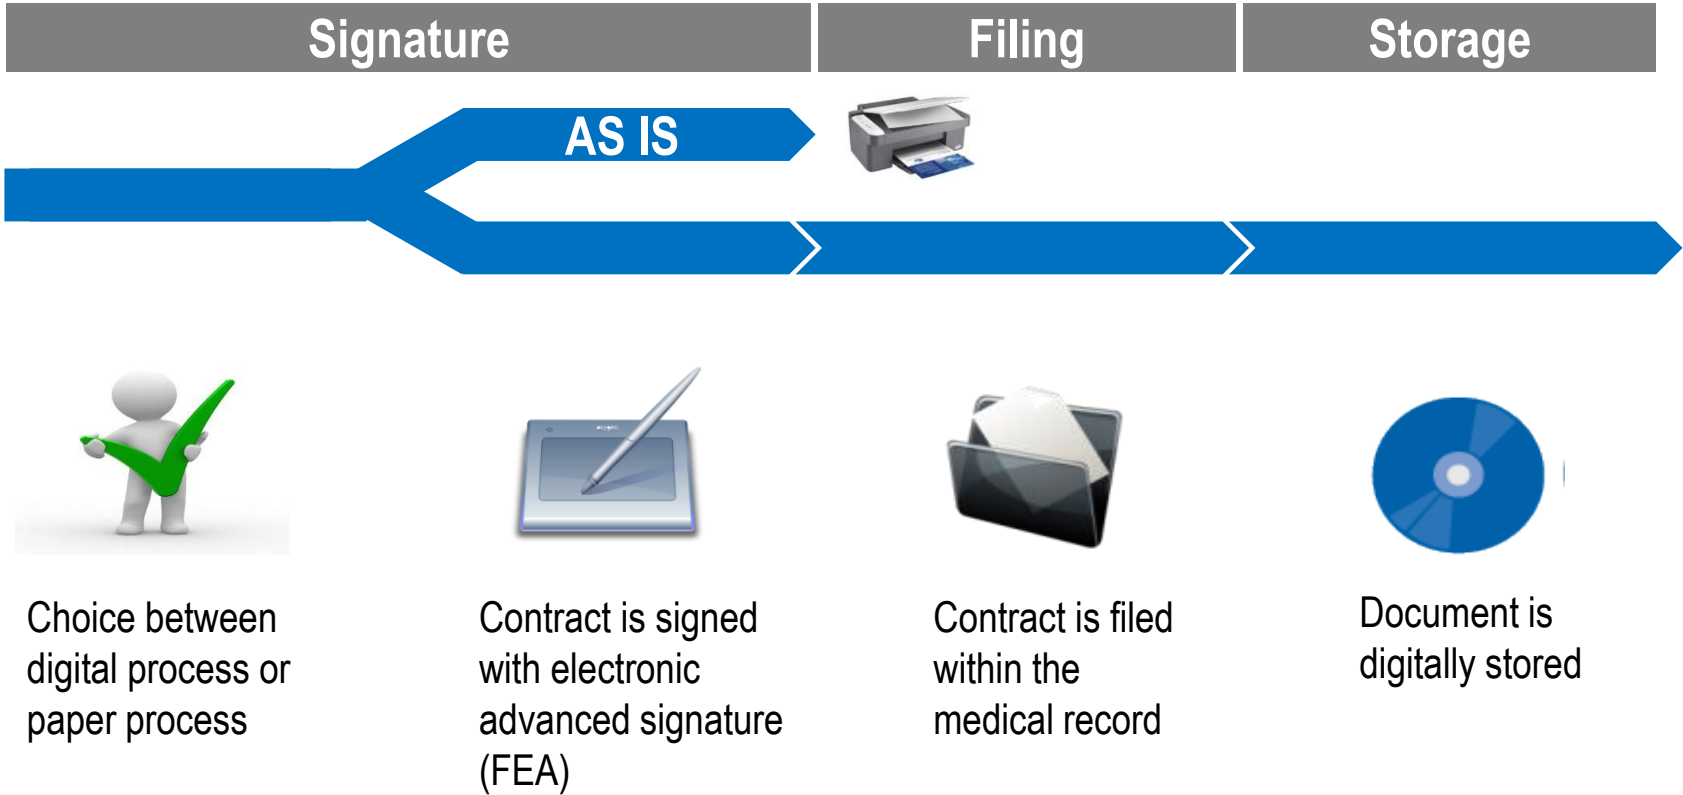

Ex.

Letter

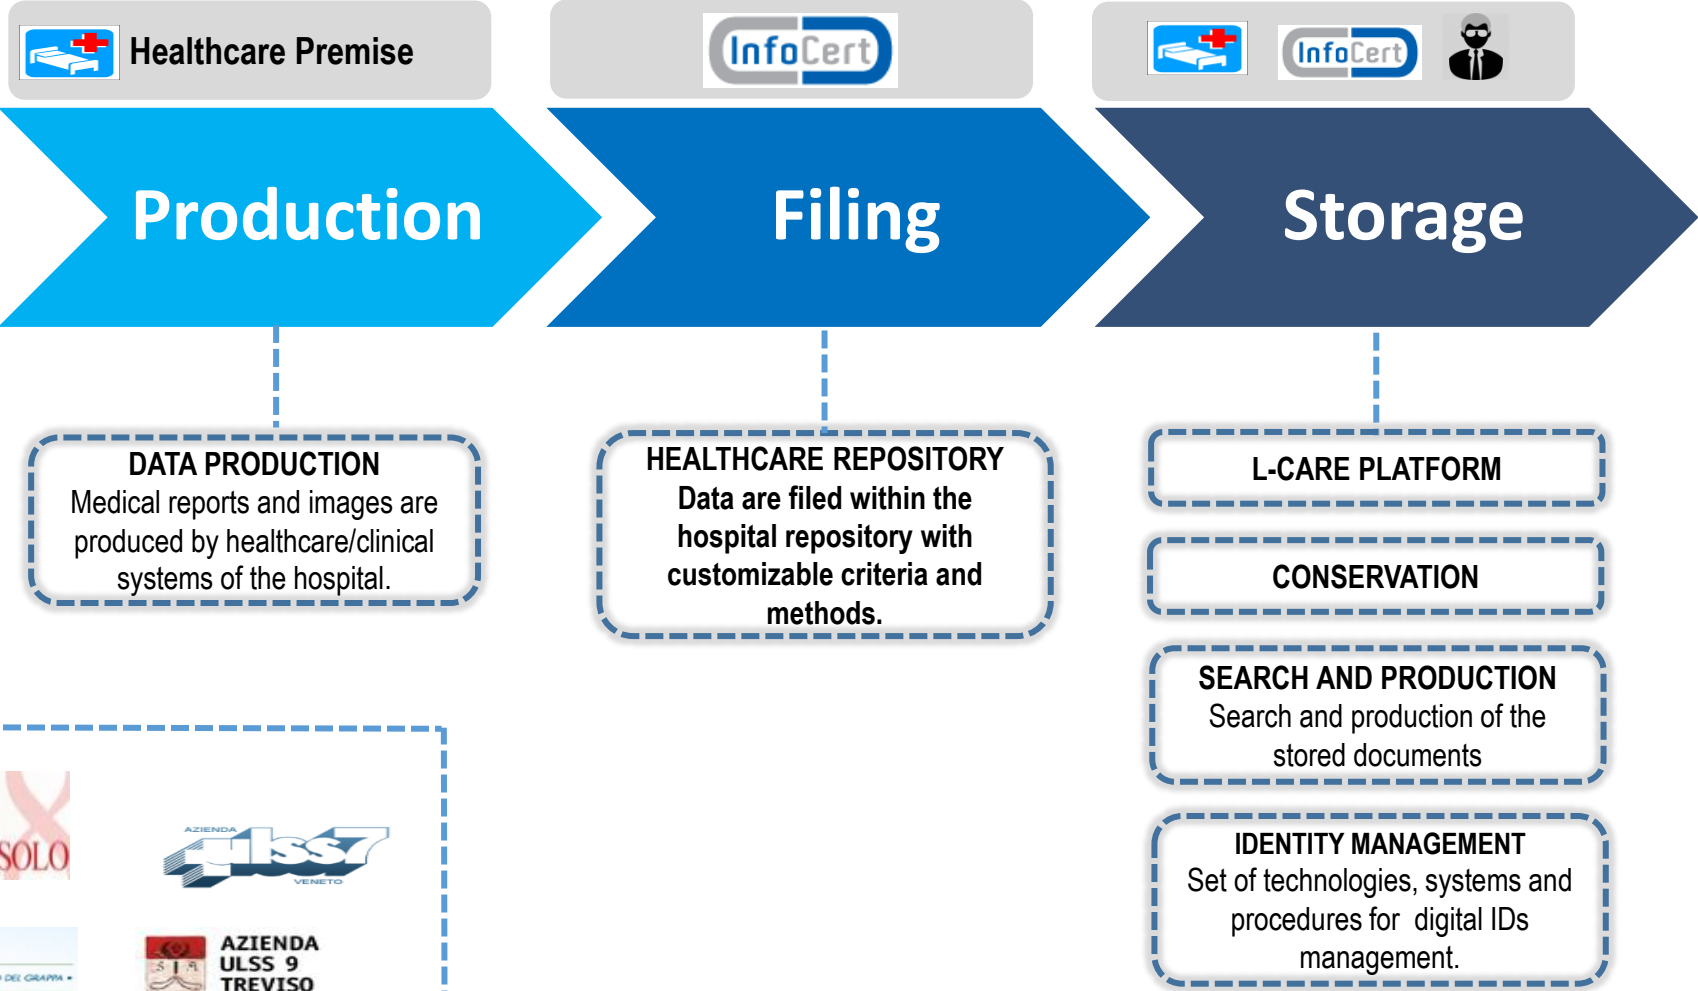

Fundamental Interactions

- ✓ The User requests to access a Service, providing his ID and valid credentials
- ✓ The Service Provider queries the Identity Provider and Attribute Provider Register at AgID
- ✓ AgID returns a copy of the register
- ✓ The Service Provider sends the authentication requests to the correct Identity Provider
- ✓ If the User has the correct level of credentials, the Identity Provider verifies its identity and gives confirmation to the service provider, along with any other attributes requested
- ✓ The authenticated user is authorized to access the service or the function requested.

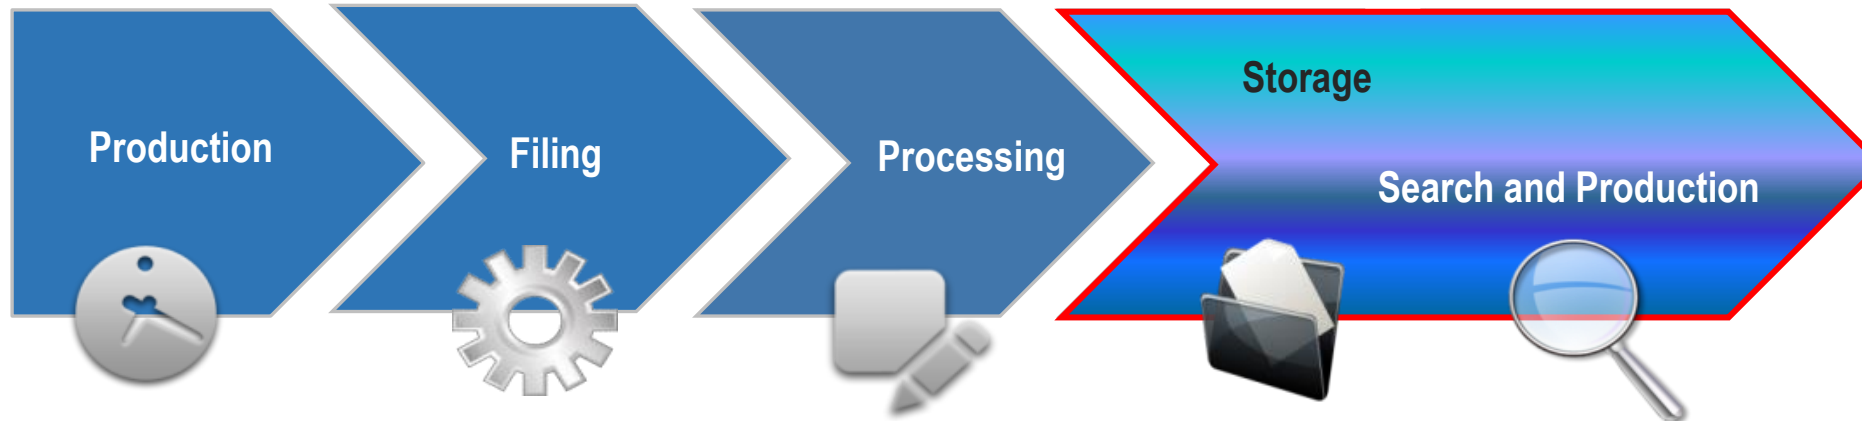

The process is guaranteed by the L-Care solution which integrates conservation. It is linked to the conservation of medical reports which have been digitally signed and of related images.

EXPERIENCES

The Electronic Health Record consists of all the medical data and documents of a patient, covering their entire life.

Features

- Standard model
- Asset management
- Document repository compliant with the XDS.b specifications of IHE

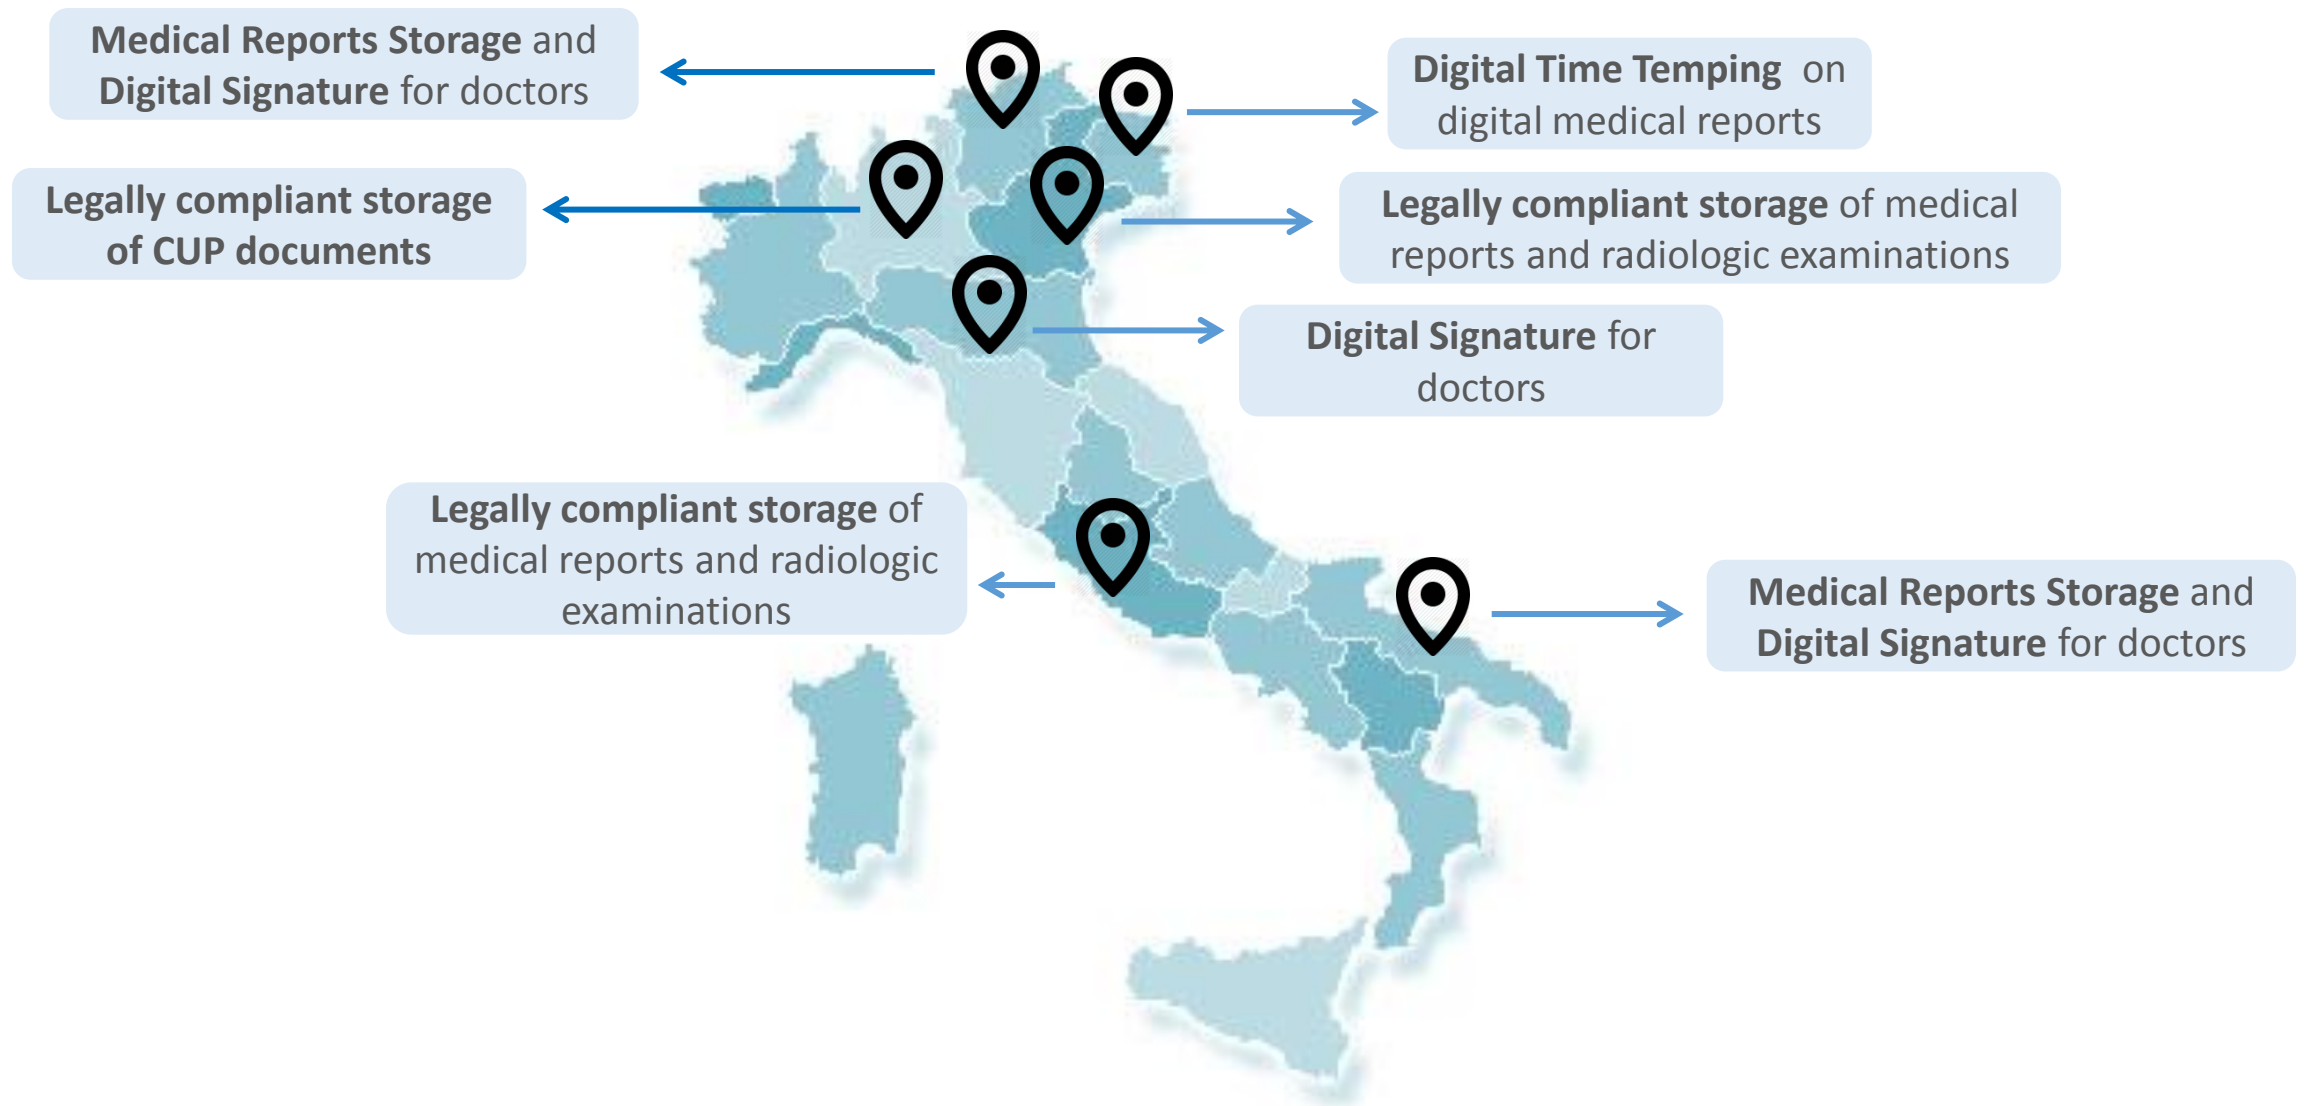

Universal search bar with semantic search engine and natural language search.
Spelling suggestions on key type.
Single click document opening.

Patient timeline.
Document access menu.
